Vishal Waghmare

Software Engineer — Backend & Data Developer
+91-8080178719 Portfolio Gmail LinkedIn GitHub

Education

University of Pune **Graduated August 2023**
Bachelor of Engineering, Electronics & Telecommunication | **CGPA: 7.63/10**
Relevant Courseworks: Data Analysis, Cloud Computing, DBMS, Project Management

Skills

Programming Language: Python, Javascript, Node.js
Data Management: Data Warehousing, Data Modeling, ETL, EDA
Backend/Server: Flask, Django, REST APIs, Celery, Docker, Google Cloud Platform
Data Visualization/Analytical Tools: Power BI
Database: MS-SQL Server, PostgreSQL, Redis
Machine Learning: Linear regression, Logistic regression, Decision trees, K-NN
Frontend/Client: HTML, CSS

Work Experience

Hardcoded (Intern — Brandhub Project) **Sept 2025 – Jan 2026**
Backend Developer — Mumbai

- Improved **REST API** and **authentication** performance by optimizing endpoints, improving latency and stability under concurrency.
- Built an image caching module using **Redis** to prevent **Azure Storage** URL expiry and improve API reliability.
- Implemented a **RabbitMQ** Queue Health Check API for **distributed services** monitoring and observability.

Independent Project **Apr 2025 – July 2025**
Software Engineer Trainee — Hyderabad

- Built a chatbot using **Python** and **Rasa**, integrating third-party APIs and an email alert system for automated workflows.
- Performed **RD** on intent recognition and automated dataset collection through **web scraping**.

Eigenlytics Data Solution **Mar 2024 – May 2024**
Software Engineer Intern — Mumbai, Maharashtra

- Analyzed customer review data to derive **sentiment** insights using Excel and **Power BI**, and created visualizations to present findings to stakeholders.
- Collaborated on developing browser automation tools using **Python** and **Flet**, improving user experience and product performance.

Projects

Uber Insight Engine **May 2024 - Aug 2024**

- Designed and implemented a data pipeline using **Google Cloud Storage** and **BigQuery** to analyze NYC TLC trip record data.
- Built interactive dashboards in **Power BI** and created **data marts** for actionable business insights and ETA predictions.
- Developed a test API for **predicting trip duration** using a Random Forest model and generating average speed values.
